SELECTED PROJECTS

Implicit Neural Representations   Sep. 2021 - Present

INR editing: In our *INS* paper, we conduct a pilot study for training stylized implicit representations (e.g., SIREN, NeRF, SDF). We obtain faithful stylizations and can interpolate between different styles to generate new mixed style. In our *INR-DSP* paper, we propose a theoretically grounded signal processing framework for Implicit Neural Representations (INR), which analytically manipulates INRs on the weight space through differential operators. In our *NeRF-SOS* paper, we propose a collaborative loss to distill the 2D feature and the density field, for self-supervised object segmentation.

Sparse view NeRF: In our *SinNeRF* paper, we propose thoughtfully designed semantic and geometry regularizations to train neural radiance field using only a single view.

NeRF augmentations: In our *Aug-NeRF* paper, we propose to augment NeRF with worst-case perturbations in three distinct levels with physical grounds. They effectively boost NeRF in both novel view synthesis (up to 1.5dB PSNR gain) and underlying geometry reconstruction.

Efficient MVS and MTL   Jul. 2019 - Present

Efficient MVS: In our *Cas-MVSNet* paper, we propose a memory and run time efficient cost volume formulation which is built upon a standard feature pyramid encoding geometry and context at gradually finer scales. We obtain a 23.1% improvement on [DTU benchmark] (**1st place**) , with **50.6% and 74.2%** reduction in GPU memory and run-time. It ranks 1st within all learning-based methods on [Tanks and Temples benchmark]. Besides, we adapt GwcNet with our proposed cost volume design, and the accuracy ranking rises from 29th to 17th with 37.0% memory reduction on [KITTI 2015 test set].

Efficient MTL: In our M^3-*ViT* paper, we propose to activate any task of interest, by integrating mixture-of-experts (MoE) layers into a ViT backbone, along with hardware-level innovations. M^3-ViT reduce the memory by 2.4x, saving 9.23x energy, on PASCAL-Context and NYUD-v2 datasets.

CAD Drawing Perception   Oct. 2020 - Present

Project Page & Product Page

We release the first large-scale real-world dataset of over 10,000 CAD drawings with line-grained annotations. It is used for architecture, engineering and construction (AEC) industries to accelerate the efficiency of 3D modeling. A new task-**panoptic symbol spotting** is proposed for evaluation the quality of panoptic symbol spotting quality.

PanCADNet: In our *FLoorPlanCAD* paper, we first propose a CNN-GCN method for semantic and instance symbol spotting respectively.

CADTransformer: In our *CADTransformer* paper, we present a Transformer-based framework by painlessly modifying existing vision transformer (ViT) to tackle the panoptic symbol spotting task.

PROFESSIONAL EXPERIENCE

Google   May. 2022 - Present
Research Intern, Supervisor: Sergio Orts Escolano and Alexander Koumis

The University of Texas at Austin   Aug. 2021 - Present
Research Assistant, Supervisor: Prof. Zhangyang (Atlas) Wang

Alibaba Cloud   Jul. 2019 - Aug. 2021
Senior Algorithm Engineer, Supervisor: Prof. Ping Tan, Dr. Siyu Zhu

Xiamen University   Aug. 2016 - Jun. 2019
Research Assistant, Supervisor: Prof. Xinghao Ding

EDUCATION

The University of Texas at Austin (UT Austin)   Aug. 2021 - Present
Ph.D. Student, Electrical and Computer Engineering   Advisor: Prof. Zhangyang (Atlas) Wang
Xiamen University (XMU)   Sep. 2016 - Jun. 2019
Master, Electronic and Communication Engineering   Advisor: Prof. Xinghao Ding

Shandong Agriculture University (SDAU)   Sep. 2012 - Jun. 2016
Bachelor, Electronic Information Science and Technology

HONORS

Fellowship & Awards

- **Qualcomm Innovation Fellowship** [Qualcomm News] [UT News]   Aug. 2022
- Professional Development Award of UT Austin   Jul. 2022
- **DAC University Demonstration (3rd place).**   Jul. 2022
- Outstanding Graduates of Xiamen University   Jun. 2019
- The First Prize Scholarship of Xiamen University   2016-2018
- AAAI 2018 Travel Award   Jan. 2018
- Outstanding Graduates of Shandong Province   Jun. 2016

INVITED TALKS

- Unified Implicit Neural Stylization" at Xiamen University and Kungfu.ai.   Jul. 2022
